# CANNONDALE HELMETS PEAK PROTECTION TECHNOLOGY

For as long as Cannondale has been designing products, we've been rethinking them. Tinkering with them. Making them better. We did it here, too. Cannondale's helmet designers took a cue from car manufacturers when building our revolutionary, cone-shaped impact-absorbing zones into our helmets. We call these zones Peak Protection. The two-layer, co-molded EPS foam in our helmets employ high- and low-density foam zones that disperse and redirect the force of an impact.

**The result is a helmet that's both 12 percent lighter\* and meets CPSC safety standards.**

## DUAL DENSITY EPS TECHNOLOGY

Cannondale's Peak Protection two-layer, co-molded EPS foam in our helmets employ high- and low-density foam zones that disperse and redirect the force of an impact.

## POLYCARBONATE OUTER SHELL

Integrity. We fuse the EPS foam with the vacuum-formed shell, creating an integrated, one-piece helmet that has the structural integrity serious riders demand.

## EMBEDDED CHASSIS

Embedded into every Cannondale helmet is a nylon chassis that helps maintain helmet integrity in the case of a crash. The benefits are superior strength, superior ventilation, superior protection.

## EXOSKELETON REINFORCEMENTS

Cannondale's SI Alloy Reinforcement bridges critical intersections to simultaneously boost helmet strength and cool factor. Exterior alloy bridges under the helmet shell are both functional and fashionable.

**Peak Protection technology uses dual-density EPS foam to reduce weight while maintaining the highest industry safety standards**

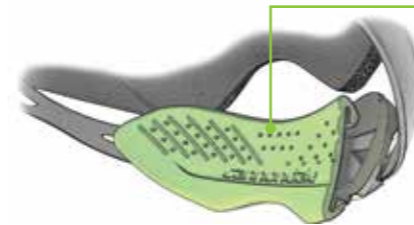

## THE RIGHT FIT

The helmet should be worn level on the head with the front approximately one finger's width above your eyebrow. The retention straps and helmet should fit as snug as possible.

## PROPRIETARY FIT SYSTEM

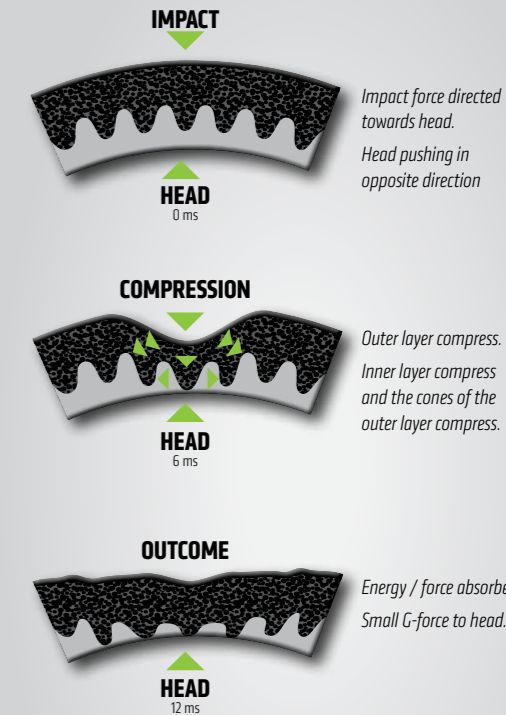

A bad fitting helmet is not only uncomfortable but not functional. Cannondale's Proprietary Fit System was designed with the rider in mind.

## FORM FITTING PAD

The soft-touch, form fitting pad uses an on-board micro-adjustment knob to dial in the perfect fit. This makes one-handed adjustments possible while still on the bike.

## PEAK PROTECTION IN ACTION

This bicycle helmet is designed to absorb the energy of one major impact. If this occurs, the helmet should be destroyed and replaced. Damaged helmets should not be used again.

No helmet can protect the wearer from all foreseeable accidents, including those involving bicycles to motor vehicle collisions. Depending on the type of impact, even a very low speed accident can result in a serious head injury or fatality. Helmets featured are designed to protect the head and cannot guard against cervical, spine or other bodily injuries that result from an accident.

\* Average weight savings, same helmet with standard EPS  
\* Average weight size medium

**NEW** CYPHER AERO®

- » Peak Protection technology uses dual-density EPS foam to reduce weight while maintaining the highest industry safety standards
- » Aerodynamic design for less drag and faster times
- » Heat-sealed anti-microbial moisture wicking pads keep the sweat under control
- » System Integrated Fit. A 3-position height adjustment allows "just-right" placement of the Ergo-fit EVA occipital pad and the micro-tension adjuster delivers a precise fit
- » Slightly deeper fit than the Teramo
- » Polycarbonate Internal Cage reinforces critical vent bridges for best in class safety and ventilation
- » Multi-molding Polycarbonate shell technology bonds the outer shell with the EPS shell for one-piece integrated design
- » Comfortable lightweight anti-microbial webbing with cam-lock dividers offers secure adjustment and all-day wearability

## TERAMO

- » Peak Protection technology uses dual-density EPS foam to reduce weight while maintaining the highest industry safety standards
- » SI alloy exoskeleton cage reinforcements combine with internal roll cage; the combination reinforces critical vent bridges for best-in-class safety and ventilation
- » Multi-molding Polycarbonate shell technology bonds the outer shell with the EPS shell for one-piece integrated design
- » 23 flow-through vents control comfort by maintaining airflow through the helmet
- » Heat-sealed moisture wicking pads keep the sweat under control
- » System Integrated micro dial w/ Ergo-fit EVA occipital pad offers a precise fit
- » Comfortable lightweight webbing with cam-lock dividers offers secure adjustment and all-day wearability
